

# Cuttyhunk CAN! eMail Blast v.1 no.1 July 28, 2022

Hello Cuttyhunk CAN! inaugural subscribers-

Greetings from the Gosnold-Cuttyhunk Climate Action Network (CCAN) - with thanks for your early support. Today we're delighted to announce the launch of our first public draft of the 2022 Gosnold Climate Action Plan. [see link below.]

We invite you to read the intro and summary - see screenshots below, or download the entire 64 page document to enjoy those parts you're particularly interested in.

All the best.

---

As noted in a message circulated by *The Cuttyhunk Telegraph* and soon to be published on *Cuttyhunk Chatter*:

The plan is the result of months of monthly meetings, conversations with the Select Board and related committees, conversations with businesses and community stakeholders, along with periodic updates at Selectboard meetings. .

The Plan was developed in conjunction with "The Vineyard Way," a project of the Martha's Vineyard Commission. The plan will be submitted to Duke's County and Commonwealth climate agencies.

It's our hope it will serve as a helpful planning document in the months ahead as we address climate change and its associated challenges.

As noted on our website - your feedback is welcome.

Cuttyhunk CAN! (With our combined efforts!)

# GOALS FOR 2040

## Goal #1: Infrastructure

By 2040, Gosnold's critical barrier beaches, roads, and infrastructure will be protected or relocated from impacts posed by climate change.

## Goal #2: Natural Resources

By 2040, Gosnold's natural resources including land, water supply, and ecosystems will be protected from impacts posed by climate change.

## Goal #3: Emergency Management

By 2040, Gosnold will have an effective emergency preparedness, response, and recovery system.

## Goal #4: Energy Transformation

By 2030, Gosnold will have maximized its ability to transform to renewable energy.

## Goal #5: Solid Waste Management

By 2024, Gosnold will reduce waste generation by developing and implementing a comprehensive solid waste management program including recycling and composting.

## Goal #6: Economic Resilience

By 2040, Gosnold's economy will have the necessary diversification, resilience, and sustainability needed to meet the challenges and opportunities resulting from climate change.
